# Where in NYC do you want to eat?

Bronx Queens Manhattan Brooklyn Staten Island

#### Introduction

#### Background

- People who want to come to New York City always ask the same question. What neighborhood is best to eat in New York City?

#### Problem

 New York City attracts all kinds of people all over the world and they all have the same thing in common, they do not know the venues around the neighborhood of New York City.

#### Interest

 I used to live in New York City but I do not know all the neighborhoods and what kind of venues it entails.

### Goal

This capstone project is to help people find places to eat in any neighbhorhood in New York City.

Which will then help them to decide which neighborhood to stay depending on the surrounding venues.

#### Data

Using data from the link:

https://geo.nyu.edu/catalog/nyu 2451 34572

- Foursquare API
- to explore neighborhoods in New York City

I will use the k-means clustering algorithm to complete this task and the Folium library to visualize the neighborhoods in New York City and their emerging clusters

## Report

- opened the json file of the date and transform it into a pandas dataframe
- called the Foursquare API to start preparing to get the dataset of venues in New York City's neighborhood
- count to see how many venues in each neighbhood
- find the most common venues and limit that to the top 10 venues for each neighborhood
- ran k-mean to cluster 5 neighborhoods
- geolocator to get New York City's latitude and longitude, then create a map of New York City with different color markers

#### Result

- The data from New York University catalog that we used to get New York City's boroughs, neighborhoods, latitude, and longitude showed that we have 5 boroughs and 306 neighborhoods.
- The data from Foursquare shows all the venues in each neighborhoods, which yield many results that I had to only limit it to the top 10 venues for each neighborhoods and created 5 clusters of the neighborhoods.
- The latitude and longitude of New York City is 40.7127281, -74.0060152.
- The map of New York City shows the 5 markers with different color to identify the different cluster. The colors are: Red = Cluster 1 (clustser 0 on map), Purple = Cluster 2 (cluster 1 on map), Blue = Cluster 3 (cluster 2 on map), Green = Cluster 4 (cluster 3 on map), Orange = Cluster 5 (cluster 4 on map).

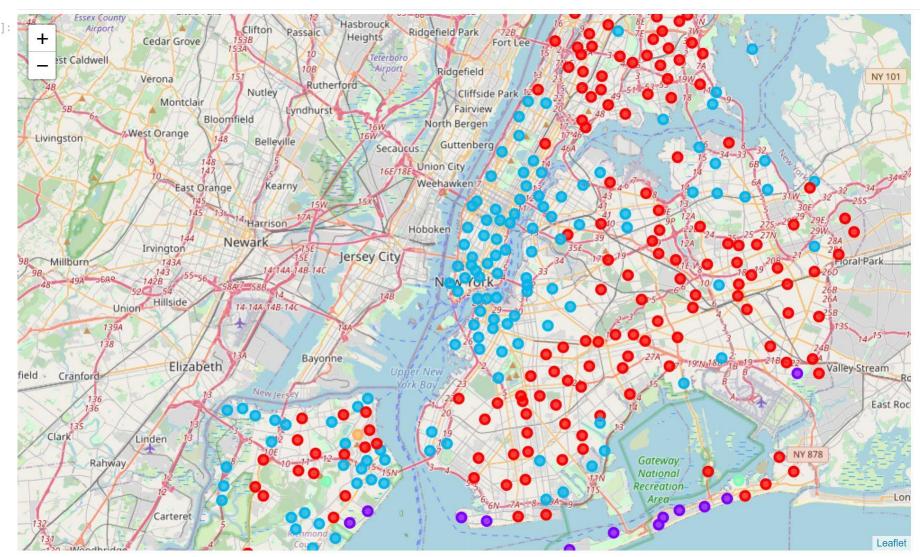

## Sample count of Venues in each Neighborhood

|                    | Neighborhood Latitude | Neighborhood Longitude | Venue | Venue Latitude | Venue Longitude | Venue Category |  |
|--------------------|-----------------------|------------------------|-------|----------------|-----------------|----------------|--|
| Neighborhood       |                       |                        |       |                |                 |                |  |

# Map of New York City

#### Observation

• From the data, it shows that New York City has many neighborhoods that are enriched with many different venues.

• In the map, cluster 1 (cluster 0, ), cluster 2 (cluster 1, ) and cluster 3 (cluster 2,) has the most venues in their area.

#### Recommendation

If you are visiting New York City or moving to different neighborhood, the best borough to stay that have a lot of venues are within Manhattan and Brooklyn.

There you cannot go wrong in finding any venues that suit your needs since the neighborhoods in those two boroughs have the most venues which you will find something that satisfy you.

#### Conclusion

New York City is a very diverse place full of culture and food. Every neighborhoods are full of different restaurants, cafes, bars, etc for you to choose from and they are open early to accommodate early birds and close at a much later time to accommodate those who work graveyard shift or for those who are just coming out of the clubs or bars.

So no matter what neighborhood you are in at anytime of day or night, there will always be venue that is open to accept you when you are hungry.

#### Notebook

To see the full results with codes, please go to my github repository, the link is:
